

## Acknowledgments and Dedication

The editors are indebted to the Social Sciences and Humanities Research Council of Canada for providing the financial support of the conference *Gift of the Nile? A Symposium and Workshop on Ancient Egypt and the Environment* held at Quest University Canada on April 2, 2017, and at the University of British Columbia on April 3, 2017. Additional financial support was granted by the UBC Hampton Grant through its SPARC program (Support Programs to Advance Research Capacity; special thanks go to Helene Dragatsi for improving the grant proposal). We would like to thank UBC and the Institute of Asian Research for hosting the April 3 conference, Quest University Canada and its former president Peter Englert for hosting the April 2 workshop, the Egyptian Expedition (Pearce Paul Creasman) for publishing the proceedings and the UCLA Encyclopedia of Egyptology (Willeke Wendrich) for in-kind support and for providing a forum for ongoing open-access publications relating to the Egyptian environment. We are thankful to Leesha Cessna, who helped to organize the conference and who prepared an initial bibliographic database relating to the Nile and the environmental history of Egypt.

The editors and authors dedicate this volume to Prof. Dr. Dr. h.c. Manfred Bietak, on the occasion of his 80th birthday. With his 1975 monograph *Tell el-Dab'a II: Der Fundort im Rahmen einer archäologisch-geographischen Untersuchung über das ägyptische Ostdelta*, Manfred Bietak has established a new methodological standard in the reconstruction of historical landscapes in ancient Egypt, and paved the way for the further study of the interface of the Nile and human society in Egyptology. As a leading archaeologist of ancient Egypt and the Near East for the past 50 years, he has shaped and transformed the discipline in a lasting way. The dedication of this volume is a tribute to his lifetime achievements in the field and moreover, the interdisciplinary dialogue that he has fostered beyond the field between the humanities and the natural sciences.

Thomas Schneider and Christine Johnston
